Ruogu “Reanna” Fang, M.S., Ph.D. is an Associate Professor in the Crayton Pruitt Family Department of Biomedical Engineering at the University of Florida. She is the Director of Smart Medical Informatics Learning and Evaluation (SMILE) Lab, Associate Director of Intelligent Critical Care Center (IC3), and affiliated faculty of Electrical and Computer Engineering, Computer and Information Science and Engineering, Radiology, and Center for Cognitive Aging and Memory in McKnight Brain Institute. As an AI researcher in medicine and healthcare, Dr. Fang’s research themes are artificial intelligence (AI)-empowered precision brain health and brain/bio-inspired AI. She focuses on questions such as: How to use machine learning to quantify brain dynamics, early diagnose Alzheimer’s disease through novel imagery, predict individualized treatment outcomes, and design precision intervention. Her current research is rooted in the confluence of AI and multimodal medical image analysis.

Since her tenure-track appointment in 2014, Fang served as She is the Principal Investigator (PI) and Co-Investigator on 26 funded grants, among which she served as PI on 10 grants. For example, she is the PI of an Information Integration and Informatics award, entitled “Modeling Multi-Level Connectivity of Brain Dynamics” and Co-PI of a Smart and Connected Health award entitled “Trustworthy and Explainable AI for Neurodegenerative Diseases”, both funded by the National Science Foundation (NSF). She is currently the PI for the RF1 (R01-equivalent) study entitled “Mechanisms, response heterogeneity and dosing from MRI-derived electric field models in tDCS augmented cognitive training: a secondary data analysis of the ACT study” funded by NIH NIA. She has published 100+ peer-reviewed papers, including 33 journals, and 27 conference proceedings with an h-index of 20.
